

Date	Time	Title	Tutor	Cost	Summary	Duration
02/06/18	9.00 - 10.50	<b>Management of Difficult Oral and Maxillofacial Cases in Dogs and Cats I</b>	Frank Verstraete/ Boaz Arzi	30 €	Management of difficult oral and maxillofacial cases in veterinary medicine is becoming more common and receiving wider acceptance. However, these challenging cases require special considerations, preparations as well as instrumentation and training. Each patient has its own circumstances such as fracture configuration, congenital defects, critical size defects as well as possible concomitant medical issues. Therefore, the aim of the present interactive session is to discuss our experience in managing a variety of difficult oral and maxillofacial disorders such as trauma, congenital disorders, TMJ ankylosis and reconstructive surgery. We will discuss consideration in preoperative planning such as the use of computed tomography and 3D modeling. Finally, surgical techniques and recent innovations will also be discussed in an interactive fashion.	50 min
	14.30 - 15.20	<b>Dentistry in exotic companion mammals</b>	Vladimir Jekl	30 €	Dentistry in exotic companion mammals is a quickly developing area of companion animal dentistry as more and more clients seeking for the best care for their pets. This is particularly true in herbivorous species with completely elodont dentition, such are rabbits, guinea pigs, chinchillas and degus. Studies published in recent years showed that the prevalence of dental disease in these species ranging from 32 to 60 % (Crossley 2001, Jekl et al. 2008, 2011, Minarikova et al 2015). In contrast to the growth of this field of veterinary dentistry, the prevention of the dental disease is still unsatisfactory and some inappropriate techniques (e.g. incisor clinical crown high adjustment, inappropriate odontogenic abscess treatment) are still performed in the veterinary practice. Moreover, feeding exotic companion mammals is still a primary concern of dental health. Interactive session will be held in a fashion – you are asking and you will have your answer.	50 min
	16.30 - 17.20	<b>Interpretation of Dental Radiograph</b>	Leen Verhaert	30 €	Radiographic examination is essential for correct diagnosis and monitoring of progression or resolution of dental disease, for monitoring outcome of treatment, and many procedures can only be performed under radiographic control. In this session radiographs of many different oral and dental pathologies will be shown for interpretation by the attendants, with the help of the lecturer. This session is intended for veterinarians with at least a basic experience in dentistry and dental radiography and is highly interactive.	50 min
